Abstract Immune-mediated injury to the CNS is common and may be triggered by the reactivation of latent virus, although a role for viral persistence in the pathogenesis of demyelinating diseases is not well understood. In this study, latently infected mice were primed with replication-defective lentiviruses to induce inflammation and demyelination. A combination of RNAseq and metabolomics analysis identified a set of metabolic markers which distinguished disease state and defined the inflammatory state of MS lesions. These data provide the first molecular evidence for a direct link between chronic viral infection and the etiology of inflammatory demyelinating disease.

Q: How to change a view (UIImageView) size in Xcode and run it on the simulator? I am new to Xcode and swift. I am making a custom view that has 2 UILabels (Left and Right) and 2 UIImageViews (top and bottom). I have run it on the simulator and it is showing fine in it. However, the UIImageViews (top and bottom) are not changing their sizes in the emulator. Is there anything I am doing wrong? Here is what I have done so far. import UIKit 2d92ce491b
