- Scanner compatibility: The SDK was developed for Epson scanners.
- The SDK is tested for optimum scanning/reading, as well as best detection of Aztec codes.
- SDK has been tested for best results in the following devices: · MacOSX and Linux · Windows · Android · iOS · Others
- Not compatible with the following devices: Canon, Fuji, Genesys, HP, IBM, Kodak, Linx, Nidec, Panasonic, Sony, and Uniden, because the SDK is not optimized for those platforms and doesn't have an optimal detection algorithm for barcodes on those platforms.

A: QR code is much better than Aztec. However, you can use both. From Wikipedia: There are two kinds of codewords in the Aztec code. Aztec-1 is used for most of the information that can be represented by a single scan line of the barcode, while Aztec-0 is used for error correction. This is why Aztec-1 is usually called one-dimensional (1D), while Aztec-0 is two-dimensional (2D). The Wikipedia page is out of date because Aztec has been obsolete for a long time. But the idea is still valid.
