Creative Browser Crack With Registration Code

Creative Browser Crack Free Download is a lightweight software application developed specifically for helping you navigate on the Internet with the aid of a simple web browser. Nothing special about the GUI The tool reveals a plain and straightforward layout that has only a few configuration settings to offer.

There's no support for a multi-tabbed layout so you cannot surf on different webpages at the same time. A help manual is not included in the package but you can easily get an idea about how the program functions thanks to its simple options. The main window can be resized, or you may activate a lock mode in order to prevent changes from being applied accidentally. Basic browsing capabilities Creative Browser is quite poor in features when it comes to helping you browse on the Internet. You are allowed to jump to the next or previous webpage, and access a set of predefined bookmarks (e.g. Google, Yahoo!, Facebook). Tests have pointed

out that Creative Browser loads webpages pretty quickly. However, not all of them are displayed correctly. The tool eats up from a moderate up to high amount of CPU and memory resources so the overall performance of the computer may be affected. If you right-click in the browsing window, you can access the features supported in Internet Explorer. These settings let you save images to a file on your computer, view source code, select all text with a single click, refresh the current webpage, and print the information. On the downside, there's no support for advanced browsing options. You are not allowed to create custom bookmarks, navigate on the

Internet in an anonymous mode, delete cookies, keep a history with visited websites and clear it, sync data between multiple devices, and set the preferred search engine, just to highlight some functions. Final remarks To sum things up, Creative Browser comes packed with limited features for helping you browse on the Internet, and is suitable especially for less experienced users who want to get used to working with a simple web browser before switching to an advanced one, like Chrome, Firefox, Opera, and Maxthon.
