DCSM2000CDownloadkeyserialnumber [BEST]

The PC version is compatible with: Windows 7, Windows Vista and Windows XP. DCSM2000CDownloadkeyserialnumber Free Unlocked RS Keys. Simple, fast and free software (CC BY 3.0). A professional Windows sound recorder, DCSM2000CDownloadkeyserialnumber Free Sound Recorder. 1 minute.1. Field of the Invention The present invention relates to a method of doping amorphous aluminum oxide through atomic gas plasma doping, and more particularly, to a method of doping amorphous aluminum oxide through atomic gas plasma doping, which is capable of doping impurities at a low temperature of about 400° C. 2. Description of the Related Art Amorphous oxide semiconductors (a-SiO<sub>2</sub>) are applied to thin film transistors (TFTs) in various semiconductor display devices such as liquid crystal displays, organic electroluminescence displays, and the like, because of their low-temperature fabrication, large substrate size, and the like. In these a-SiO<sub>2</sub> thin films, amorphous silicon is deposited on a glass substrate, and then an a-SiO<sub>2</sub> thin film is formed using a plasma doping method or a sputtering method. It has been known that a plurality of aluminum vacancies are formed in the a-SiO<sub>2</sub> thin film as follows. When amorphous silicon is deposited on a glass substrate and an a-SiO<sub>2</sub> thin film is formed thereon, aluminum atoms and oxygen atoms are bonded to the thin film, and then the glass substrate is heated at a temperature of about 700° C., so that oxygen is released from the glass substrate as a gaseous oxygen and the aluminum atoms are bonded to the released oxygen to form a-SiO<sub>2</sub>. The oxygen released from the glass substrate reacts with the bonded aluminum atoms to form a plurality of aluminum vacancies in the thin film. The above-mentioned phenomenon may be used as the supply of oxygen to a-SiO<sub>2</sub>. Recently, a few methods of doping oxygen into the a-SiO<sub>2</sub> thin film using atomic gas plasma have been suggested. Among the suggested methods, a method of doping oxygen using a plasma generated from argon, helium, or nitrogen, using a hydrogen plasma or a hydrogen radical, generated from a hydrogen plasma, has been suggested. The method is disclosed in U.S. Pat. No. 5,891,716 and Korean Laid Open Patent Publication No. 2001-85333. The method
