Xilisoft iPhone Transfer is a feature-rich software application designed to help you easily transfer data from your computer to an iPhone device, and vice versa. It features a clean and intuitive interface with all the iPhone file categories neatly organized by type - Music, Movies, Playlists, Voice Memos, Books, Photos, Camera Roll, Photo Stream, Ringtones, Contacts, Messages, Apps and Notes. At startup, however, you can get an overview on the iPhone's technical specifications, namely total capacity and size occupied by audio, video, photo, books and other file types, along with available space, phone type, version, serial number and format. It is possible to preview songs and videos in a built-in media player and capture frames, copy items to the computer, iTunes or other devices, add new files and folders to the iPhone, create playlists, give ratings, attach artwork, edit metadata, and view file properties (e.g. type, size format, sample rate, date of last modification). Furthermore, you can sort music by songs, albums, artists, genres or composers, movies and photos by titles or genres, the camera roll by images or videos, along with contacts and messages. A search function is available for each aforementioned module. You can rename items, export contacts to CSV (for Google Contacts), vCard files (VCF) for Outlook and Windows contacts, or to vCard single files for other address books, import contacts from CSVs and VCFs, or delete them, export messages to HTML or TXT, as well as edit notes. The program supports multiple skins and languages, along with a few configuration options: change the default snapshot folder and format (JPG, PNG or BMP), disable automatic backup for updates, edit notebook power management options, auto-rotate photos while adding or exporting, and edit proxy parameters.
