- 3D Modelling: ParticleGalaxy is the first solution that enables you to work directly in 3D in the graphic environment. - Advanced Physics: The solution allows to generate complex collision effects through particle acceleration, gravity effects and gas simulation. - Powerful Modelling Tools: Even if you do not have a lot of time to make a model, the solution allows you to generate an environment. - Interactive Editing Tools: The solution allows to directly change the model and to interact directly with it, thanks to the real time visualization. - Powerful Texturing: The solution is compatible with powerful standard textures. - Pre-assembled Library: You can download in advance the full library of effects for you to be able to reuse your existing design. - Full support: You can integrate ParticleGalaxy in your projects thanks to the powerful cross platform API. ParticleGalaxy Features: - 3D Modelling - Advanced Physics - Powerful Modelling Tools - Interactive Editing Tools - Pre-assembled Library - Powerful Texturing - Full support Key Features: - Built-in rendering engine for Cinema 4D, Maya and 3D Max - Cross platform API - Fully compatible with standard and real-time textures - Possibility to export the library of effects as part of your project, ready to be reused in the future Available Formats ParticleGalaxy Features: - 3D Modelling: ParticleGalaxy is the first solution that enables you to work directly in 3D in the graphic environment. - Advanced Physics: The solution allows to generate complex collision effects through particle acceleration, gravity effects and gas simulation. - Powerful Modelling Tools: Even if you do not have a lot of time to make a model, the solution allows you to generate an environment. - Interactive Editing Tools: The solution allows to directly change the model and to interact directly with it, thanks to the real time visualization. - Powerful Texturing: The solution is compatible with powerful standard textures. - Pre-assembled Library: You can download in advance the full library of effects for you to be able to reuse your existing design. - Full support: You can integrate ParticleGalaxy in your projects thanks to the powerful cross platform API. *Generate particles from the generated code. *Create amazing visual effects with hundreds of customizable parameters. *Manage your particles in a simple and effective way. *Ready-to-use presets with color variations. *Dynamic camera motion with camera faders. *Free adjustments of the particle motion. *Multiple camera views. *Import, export, and manipulate your particles. Supports both 3D, 2D, as well as 360 Stereoscopic (VR) based camera support, as well as the ability to add, edit, or delete layers of parameters or effects. ParticleGalaxy also offers built-in presets with custom effects and parameters, which are combined in a simple and intuitive interface. You can easily modify any of the particle settings at any time, because you always have full control over the parameters. Key features: * Hundreds of customizable parameters * Ready-to-use presets * Create and modify the presets * Add, delete, as well as change of parameters * Fast and easy selection of particles * Real-time monitoring and feedback * Multiple views * Import, export and manipulate the particles. * Send data about the particles to a video player *Single* page* User* Interface* allows* easy* selection* of particles and parameters*.* Key features: * Hundreds of customizable parameters * Ready-to-use presets * Create and modify the presets * Add, delete, as well as change of parameters * Fast and easy selection of particles * Real-time monitoring and feedback * Multiple views * Import, export and manipulate the particles. * Send data about the particles to a video player *UDP packet support:* UDP is a simple and reliable protocol for sending and receiving data across a network. It is mainly used to communicate between a game server and a client over a network. It is a lightweight protocol with a simple data format that can be used to encode and decode data. It is possible to use UDP packets for sending data to the screen, while keeping the number of packets per second low. NOTE: Version 4.0.4 has been released! This update fixes the following: * The color of the fire particles are changed. * The amount of fire particles in the scene is changed. * The amount of smoke particles in the scene is changed. * The amount of smoke particles in the fire is changed. * The total amount of particles and presets are changed. * The "particle manipulation" effect in the scene preset are changed. Version 4.0.3 has been released! This update fixes the following: * The color of the smoke particles are changed. * The amount of smoke particles in the scene is changed. * The amount of smoke particles in the fire is
