What's New In?

AutoCAD has always been designed to aid you with drawing, but with the Markup import feature, you can now incorporate feedback in a variety of ways: when you import something from paper or PDFs, you can create an editable copy, overlay new marks with existing marks, or generate a drawn copy. (video: 1:27 min.) Importing printed paper or PDFs has been one of the most-requested features by users since we first introduced the Markup feature in AutoCAD. To give our users more flexibility in incorporating feedback, we've added this feature to AutoCAD and created a new Markup Import dialog box. The new feature makes it possible to choose from a variety of options. Importing Drawings from Paper or PDFs You can import feedback from paper or PDFs without having to open your drawing. With this new Markup Import feature, you can import an editable copy, or overlay new marks with existing marks. You can even generate a drawn copy. Importing Drawings from Paper or PDFs – One of the simplest ways to incorporate feedback is to import a paper or PDF that you've printed or created, and add new or edit existing marks. When you import drawings, you can choose to edit the original file or import an editable copy. You can even choose to import or edit a copy of the drawing. (video: 1:40 min.) Importing Drawings from Paper or PDFs – An alternative to importing and editing a copy of the original drawing is to overlay new marks with existing marks. This option lets you use existing marks as a template, and then import the feedback. After importing, you can choose the option for the new marks to overlay existing or generate a new drawing. (video: 1:46 min.) Importing Drawings from Paper or PDFs – The last option is to import a copy of the original drawing with all marks that need to be updated. This creates a copy of the original drawing and lets you continue working with it as you modify the original drawing. Importing Drawings from Paper or PDFs – For larger, complex projects, you can often send paper and PDF feedback to AutoCAD and create a new drawing. This is especially useful if you don't have a specific file that you need to work on, or when you want to incorporate feedback from a large number of pieces of paper or PDFs
