X265 AA [BEST] The US
Supreme Court, in , wrote that it is
a general rule of copyright law that
"the owner of a particular copy of
a copyrighted work may reproduce
and sell or distribute that copy as
he sees fit" . We present a study on
the effects of ripening on the

chemical composition of organically and conventionally farmed kiwi fruits (*Actinidia hypogaea*). Farmed kiwi fruits were sampled from two commercial smallholder farms in New Zealand, one farmed organically and the other conventionally. Kiwi fruits were randomly sampled from a crate for one commercial seller and a retailer for both farmers' farms. Apple-kiwi fruits were also purchased from two supermarkets

in Auckland. Conventional kiwi fruits were typically a brighter orange colour, had greater firmness and juice content, were higher in citric acid, glucose, fructose, pH, titratable acidity and anthocyanins, had greater total polyphenol content, and more strawberry flavour compared to organically grown kiwi fruits. Organically grown kiwi fruits had higher total polyphenol content and a higher ratio of A-type flavonols to total flavonols

compared to the conventionally grown kiwi fruits. When comparing organically and conventionally grown fruits from the same farm, they were more similar in terms of colour, flavour, firmness and fruit structure. Fruit from the organic farm had slightly higher malic acid content than the conventionally farmed fruit. Kiwi fruit from organic farm had greater concentrations of anthocyanin and total polyphenol compounds than conventionally

grown kiwi fruit. There was no difference in the bioactive compounds of apple-kiwi fruits. The study suggests that conventional kiwi farming practices may be of concern to consumers of kiwi fruit due to the large differences in the chemical composition of fruit from conventionally and organically farmed fruit. There was no consistent difference in chemical composition between conventionally grown fruit from

the two different farms. Abstract:
Distribution, accumulation and
characterization of trace elements
in the shoots of the leguminous
plant *Amaranthus caudatus*, a wild
