## Formato Afil 02 Imss Editable .pdf | Temp

A: You can use the PdfFileWriter class to make an editable pdf file: Once the file is written you can use the PdfDocument class to open it and manipulate the content:

```
Example: PdfFileWriter fileWriter = new PdfFileWriter(destinationPath);
fileWriter.write(source); //open the resulting pdf file PdfDocument pdfDocument =
new PdfDocument(new PdfReader(destinationPath), new
PdfWriter(destinationPath)); //get the pages you want to manipulate List pages =
pdfDocument.getImportedPages(1); //add a simple shape on a page PdfAnnotation
pdfAnnotation = PdfAnnotation.createNote(pages[0]);
pdfAnnotation.setRectangle(100, 100, 100, 100);
```

```
pdfAnnotation.setColorFill(BaseColor.BLUE); //save the pdf fileWriter.close();
pdfDocument.save(destinationPath); pdfDocument.close(); Sources: Q: what is the
best approach to use different property files for different environment I am writing
an application in which my application have to read some properties from a local
property file and some properties from a server based property file. So what is the
best approach to read properties from those files. 1)Make two different xml files and
read those properties. 2)Make one xml file and also have some more properties in
properties file and then read properties from that file(using a tokenizer) 3)Or can
use some methods that read properties from an xml file. A: You have 648931e174
