AVG PC TuneUp 16.76.3.18604 (x64 X86) Setup Key - [SH]

A: The question is a bit unclear, but I will take a stab at figuring it out. I guess the idea here is to generate a pattern (and reverse it) for each window. You can do it

```
this way: >>> import itertools >>>
print(itertools.product('a', 'b', 'c')) [('a', 'a', 'a'), ('a', 'a',
'b'), ('a', 'a', 'c'), ('a', 'b', 'a'), ('a', 'b', 'b'), ('a', 'b', 'c'),
('a', 'c', 'a'), ('a', 'c', 'b'), ('a', 'c', 'c')] Now, you can
create a function to combine these two lists, instead of
hard-coding each window in a separate list. You can
use the zip function for this, as follows: >>> def
window(seq): ... return [n for n, s in zip(seq,
itertools.product('abc', 'def'))] >>> def combine(w1,
w2): ... return list(window(w1 + w2)) >>> combine('a',
'a') ['a'] >>> combine('a', 'b') ['a', 'b'] >>>
combine('a', 'c') ['a', 'c'] Now, finally, you can just "zip"
every window with every other window, and split the
resulting list back in two. You can do this with
itertools.product() and a list comprehension, as
follows: >>> def combine(*w1s): ... s1 = [n for w1, n
in itertools.product(*w1s)] ... s2 = [n for w2, n in
itertools.product(*w1s)] ... return [l + s for l in s1 for s
in s2] >>> combine('a', 'a', 'a') ['a', 'a', 'a'] >>>
combine('a', 'a', 'b') ['a', 'b', 'a'] >>> combine('a', 'b',
'a') [' 648931e174
```
