* PowerPoint, which stores information in slides, is an established application for delivering content in spoken form and has become ubiquitous in the content marketing realm. This application is accessible to users who are not proficient with a computerized camera or digital image editor. That said, if you really get into content creation, you will need to use a camera and most likely a digital image editor to create and modify images. ## PowerPoint PowerPoint is a multipurpose presentation software in which you can create a variety of slides. Its name is derived from the slides used in sermons in Catholic services. The construction of a PowerPoint presentation is linear. As the first slide is added, the second slide will automatically follow because you can't add it until the first slide is completed. At its core, PowerPoint is a multipurpose presentation program with some basic graphics tools and features for creating images that can be inserted into a slide. For more advanced graphics or image editing, PowerPoint isn't the best tool. ## Google Docs Google Docs has several purposes, including writing, editing, and sharing documents. You have the ability to upload a variety of file types and to collaborate with others. It's different from standard Microsoft Office because it is web-based and free. There are dozens of different features and tools available in Google Docs. Google Docs enables you to create any type of office document including Microsoft Word documents, spreadsheets, and tables. Google Docs enables you to collaborate with others on a single document (with Google Docs) or to create documents with your team (with Google Drive). * Like the other platforms on this list, InDesign and Adobe Illustrator are professional graphic design tools. They enable you to create any type of document, including brochures, advertisements, invitations, and other similar print content. However, while the other content platforms have their own graphic design capabilities, InDesign is the best place to start designing anything you will print or distribute. If you are not on a computer, Adobe InDesign provides an Apple or Windows tablet application that enables you to simulate the design in your tablet or smartphone. When designing for print, you should ensure that your design is scalable — that is, it can be printed or displayed at various sizes. Simply scaling up your design, or reducing your design at the appropriate ratio, will affect the image quality. Scaling your design up too large will make it blurry. Scaling your design down to

addition to controls. My goal is to find the root from this data set. Currently, I am using three different methods with  
differing success, one of which is the correlation coefficient. I wanted to see if the statisticians community had any  
suggestions or methods for how to calculate the root of this dataset. Below is an example of my dataset: tree
